12 (Technology.php?tech=24&page=12&subject=Ajax Interview Questions and Answers)

Ques 51. Does this mean Adaptive Path is anti-Flash?

Ans.

Not at all. Macromedia is an Adaptive Path client, and we?ve long been supporters of Flash technology. As Ajax matures, we expect that sometimes Ajax will be the better solution to a particular problem, and sometimes Flash will be the better solution. We?re also interested in exploring ways the technologies can be mixed (as in the case of Flickr, which uses both).

Is it helpful? Yes No Add Comment View Comments

Ques 52. Where can I find examples of AJAX?

Ans. While components of AJAX have been around for some time (for instance, 1999 for XMLHttpRequest), it really didn't become that popular until Google took...

Is it helpful? Yes No Add Comment View Comments

Ques 53. What is the XMLHttpRequest object?

Ans.

It offers a non-blocking way for JavaScript to communicate back to the web server to update only part of the web page.

Is it helpful? Yes No Add Comment View Comments

Ques 54. Does Ajax have significant accessibility or browser compatibility limitations? Do Ajax applications break the back button? Is Ajax compatible with REST? Are there security considerations with Ajax development? Can Ajax applications be made to work for users who have JavaScript turned off?

Ans.

The answer to all of these questions is ?maybe?. Many developers are already working on ways to address these concerns. We think there?s more work to be done to determine all the limitations of Ajax, and we expect the Ajax development community to uncover more issues like these along the way.

Ques 55. How do I access data from other domains to create a mashup with Java?

Ans.

From your JavaScript clients you can access data in other domains if the return data is provide in JSON format. In essence you can create a JavaScript client that runs operates using data from a different server. This technique is know as

JSON with Padding or JSONP. There are questions as to whether this method is secure as you are retrieving data from outside your domain and allowing it to be excuted in the context of your domain. Not all data from third parties is accessible as JSON and in some cases you may want an extra level of protection. With Java you can provide a proxy to third party services using a web component such as a servlet. This proxy can manage the communication with a third party service and provide the data to your clients in a format of your choosing. You can also cache data at your proxy and reduce trips to service. For more on using a Java proxy to create mashups see The XmlHttpProxy Client for Java.
