Ques 31. What Browsers does HTML_AJAX work with?

Ans. As of 0.3.0, all the examples that ship with HTML_AJAX have been verified to work with

* Firefox 1.0+

* Internet Explorer 5.5+ (5.0 should work but it hasn't been tested)

Most things work with

* Safari 2+

* Opera 8.5+

Is it helpful? Yes No Add Comment View Comments

Ques 32. Is the server or the client in control?

Ans. It depends. With AJAX the answer is more in between. Control can be more centralized in a server-side component or as a mix of client-side and server-side controllers.

* Centralized server-side controller - When having a more centralized controller the key is to make sure the data in client-side page is in sync with that of the server. Some applications may keep all the state on the server and push all updates to client DOM via a simple JavaScript controller.

* Client and server-side controllers - This architecture would use JavaScript to do all presentation related control, event processing, page manipulation, and rendering of model data on the client. The server-side would be responsible for things such as business logic and pushing updated model data to the client. In this case the server would not have intimate knowledge of the presentation short of the initial page that would be sent to the client page request.

There are some use cases where an entire AJAX application can be written in a single page. Keep in mind if you choose this type of architecture that navigation and bookmarking should be considered.

Both methods are viable depending on what you are trying to accomplish. I tend to prefer spreading the control across the client and server.

Ques 33. Is Ajax just another name for XMLHttpRequest?

Ans. No. XMLHttpRequest is only part of the Ajax equation. XMLHttpRequest is the technical component that makes the asynchronous server communication possible; Ajax is our name for the overall approach described in the article, which relies not only on XMLHttpRequest, but on CSS, DOM, and other technologies.

Ques 34. How do I abort the current XMLHttpRequest?

Ans. Just call the abort() method on the request.

Is it helpful? Yes No Add Comment View Comments

Ques 35. What is the minimum version of PHP that needs to be running in order to use HTML_AJAX?

Ans. The oldest PHP version i've fully tested HTML_AJAX is 4.3.11, but it should run on 4.2.0 without any problems. (Testing reports from PHP versions older then 4.3.11 would be appreciated.)
