12 (Technology.php?tech=8&page=12&subject=JavaScript Interview Questions and Answers)

#### Ques 26. Explain String functions in Javascript.

**Ans.** a class defines a new type (formally, Abstract Data Type) encapsulates data (properties) and operations on that data (methods)

a String encapsulates a sequence of characters, enclosed in quotes

properties include

length : stores the number of characters in the string

methods include

charAt(index) : returns the character stored at the given index  
(as in C++/Java, indices start at 0)

substring(start, end) : returns the part of the string between the start (inclusive) and end (exclusive) indices

toUpperCase() : returns copy of string with letters uppercase

toLowerCase() : returns copy of string with letters lowercase

to create a string, assign using new or just make a direct assignment (new is implicit)

word = new String("foo"); word = "foo";

properties/methods are called exactly as in C++/Java

word.length word.charAt(0)

Is it helpful?

☐ Yes ☐ No
