Ques 21. Some of the Google examples you cite don't use XML at all. Do I have to use XML and/or XSLT in an Ajax application?

Ans. No. XML is the most fully-developed means of getting data in and out of an Ajax client, but there's no reason you couldn't accomplish the same effects using a technology like JavaScript Object Notation or any similar means of structuring data for interchange.

Is it helpful? Yes No [Add Comment](#) [View Comments](#)

Ques 22. When do I use a synchronous versus a asynchronous request?

Ans. Good question. They don't call it AJAX for nothing! A synchronous request would block in page event processing and I don't see many use cases where a synchronous request is preferable.

Is it helpful? Yes No [Add Comment](#) [View Comments](#)

Ques 23. How do I handle concurrent AJAX requests?

Ans. With JavaScript you can have more than one AJAX request processing at a single time. In order to insure the proper post processing of code it is recommended that you use JavaScript Closures. The example below shows an XMLHttpRequest object abstracted by a JavaScript object called AJAXInteraction. As arguments you pass in the URL to call and the function to call when the processing is done.

```
function AJAXInteraction(url, callback) {
    var req = init();
    req.onreadystatechange = processRequest;

    function init() {
        if(window.XMLHttpRequest) {
            return new XMLHttpRequest();
        } else if(window.ActiveXObject) {
            return new ActiveXObject("Microsoft.XMLHTTP");
        }
    }

    function processRequest () {
        // ...
    }
}
```

Spring Framework (Technology.php?tech=23&subject=Spring Framework Interview Questions and Answers)	53	<pre>this.doPost = function(body) { req.open("POST", url, true); req.setRequestHeader("Content-Type", "application/x-www-form-urlencoded"); req.send(body); }</pre>	Microsoft .NET (OnlineTestStart.php?quizId=5&quiz=Microsoft .NET Online Practice Test Online Exam)
Google Gson (Technology.php?tech=62&subject=Google Gson Interview Questions and Answers)	8	<pre>function makeRequest() { var ai = new AJAXInteraction("processme", function() { alert("Doing Post Process");}); ai.doGet(); }</pre>	ASP.Net (OnlineTestStart.php?quizId=70&quiz=ASP.Net Online Practice Test Online Exam)
RichFaces (Technology.php?tech=53&subject=RichFaces Interview Questions and Answers)	26	<p>The function makeRequest() in the example above creates an AJAXInteraction with a URL to of "processme" and an inline function that will show an alert dialog with the message "Doing Post Process". When ai.doGet() is called the AJAX interaction is initiated and when server-side component mapped to the URL "processme" returns a document which is passed to the callback function that was specified when the AJAXInteraction was created.</p> <p>Using this closures insures that the proper callback function associated with a specific AJAX interaction is called.</p> <p>Caution should still be taken when creating multiple closure objects in that make XMLHttpRequests as to there is a limited number of sockets that are used to make requests at any given time. Because there are limited number of requests that can be made concurrently. Internet Explorer for example only allows for two concurrent AJAX requests at any given time. Other browsers may allow more but it is generally between three and five requests. You may choose to use pool of AJAXInteraction objects.</p>	Database

Java Beans (Technology.php?tech=35&subject=Java Beans Interview Questions and Answers)	57	<p>One thing to note when making multiple AJAX calls from the client is that the calls are not guaranteed to return in any given order. Having closures within the callback of a closure object can be used to ensure dependencies are processed correctly.</p> <p>There is a discussion titled Ajaxian Fire and Forget Pattern that is helpful.</p>	SQL (OnlineTestStart.php?quizId=15&quiz=SQL Online Practice Test Online Exam)
Struts (Technology.php?tech=4&subject=Struts Interview Questions and Answers)	84	<p>Is it helpful? <input checked="" type="radio"/> Yes <input type="radio"/> No Add Comment View Comments</p> <p>Ques 24. What do I do on the server to interact with an AJAX client?</p> <p>Ans. The "Content-Type" header needs to be set to "text/xml". In servlets this may be done using the <code>HttpServletResponse.setContentType()</code> should be set to "text/xml" when the return type is XML. Many <code>XMLHttpRequest</code> implementations will result in an error if the "Content-Type" header is set. The code below shows how to set the "Content-Type".</p> <pre>response.setContentType("text/xml"); response.getWriter().write("invalid");</pre> <p>You may also want to set whether or not to set the <code>caches</code> header for cases such as autocomplete where you may want to notify proxy servers/and browsers not to cache the results.</p> <pre>response.setContentType("text/xml"); response.setHeader("Cache-Control", "no-cache"); response.getWriter().write("invalid");</pre> <p>Note to the developer: Internet Explorer will automatically use a cached result of any AJAX response from a HTTP GET if this header is not set which can make things difficult for a developer. During development mode you may want set</p>	MySQL (OnlineTestStart.php?quizId=31&quiz=MySQL Online Practice Test Online Exam)

Tomcat (Technology.php? tech=33&subject=Tomcat Interview Questions and Answers) 16	As with other browser based web applications you have a few options which include: * On the client in cookies - The size is limited (generally around 4KB X 20 cookies per domain so a total of 80KB) and the content may not be secure unless encrypted which is difficult but not impossible using JavaScript. * On the client in the page - This can be done securely but can be problematic and difficult to work with. See my blog entry on Storing State on the Client for more details on this topic. * On the client file system - This can be done if the client grants access to the browser to write to the local file system. Depending on your use cases this may be necessary but caution is advised. * On the Server - This is closer to the traditional model where the client view is of the state on the server. Keeping the data in sync can be a bit problematic and thus we have a solution Refreshing Data on this. As more information processing and control moves to the client where state is stored will need to be re-evaluated.
