12 (Technology.php?tech=24&page=12&subject=Ajax Interview Questions and Answers)

### Ques 41. Is AJAX code cross browser compatible?

**Ans.** Not totally. Most browsers offer a native XMLHttpRequest JavaScript object, while another one (Internet Explorer) require you to get it as an ActiveX object....

Is it helpful?  Yes  No

[Add Comment](#) [View Comments](#)

### Ques 42. Techniques for asynchronous server communication have been around for years. What makes Ajax a new approach?

**Ans.** What's new is the prominent use of these techniques in real-world applications to change the fundamental interaction model of the Web. Ajax is taking hold now because these technologies and the industry's understanding of how to deploy them most effectively have taken time to develop.

Is it helpful?  Yes  No

[Add Comment](#) [View Comments](#)

### Ques 43. Is Ajax a technology platform or is it an architectural style?

**Ans.** It's both. Ajax is a set of technologies being used together in a particular way.

Is it helpful?  Yes  No

[Add Comment](#) [View Comments](#)

### Ques 44. How do I handle the back and forward buttons?

**Ans.** While you could go out and create a custom solution that tracks the current state on your application I recommend you leave this to the experts. Dojo addresses the navigation in a browser neutral way as can be seen in the JavaScript example below.

```
function updateOnServer(oldId, oldValue,
itemId, itemValue) {
var bindArgs = {
url: "faces/ajax-dlabel-update",
method: "post",
content: {"component-id": itemId, "component-value": itemValue},
mimetype: "text/xml",
load: function(type, data) {
processUpdateResponse(data);
},
```

RichFaces (Technology.php? tech=53&subject=RichFaces Interview Questions and Answers)	26	<pre>backButton: function() {     alert("old itemid was " + oldId); }, forwardButton: function(){     alert("forward we must go!"); } ; dojo.io.bind(bindArgs);</pre>	J2EE (OnlineTestStart.php? quizId=22&quiz=J2EE Online Practice Test   Online Exam)
Apache Wicket (Technology.php? tech=66&subject=Apache Wicket Interview Questions and Answers)	26		.NET
JAXB (Technology.php? tech=44&subject=JAXB Interview Questions and Answers)	18	<p>The example above will update a value on the server using dojo.io.bind() with a function as a property that is responsible for dealing with the browser back button event. As a developer you are capable of restoring the value to the oldValue or taking any other action that you see fit. The underlying details of how the browser button event are detected are hidden from the developer by Dojo.</p> <p>AJAX: How to Handle Bookmarks and Back Buttons details this problem and provides a JavaScript library Really Simple History framework (RSH) that focuses just on the back and forward issue.</p>	VB.Net (OnlineTestStart.php? quizId=72&quiz=VB.Net Online Practice Test   Online Exam)
Java Beans (Technology.php? tech=35&subject=Java Beans Interview Questions and Answers)	57	<p>Is it helpful? <input checked="" type="radio"/> Yes <input type="radio"/> No</p> <a href="#">Add Comment</a> <a href="#">View Comments</a>	Microsoft .NET (OnlineTestStart.php? quizId=5&quiz=Microsoft .NET Online Practice Test   Online Exam)
Struts (Technology.php? tech=4&subject=Struts Interview Questions and Answers)	84	<p><b>Ques 45. How does HTML_AJAX compare with the XAJAX project at Sourceforge?</b></p> <p><b>Ans.</b></p> <p>XAJAX uses XML as a transport for data between the webpage and server, and you don't write your own javascript data handlers to manipulate the data received from the server. Instead you use a php class and built in javascript methods, a combination that works very similar to the HTML_AJAX_Action class and haSerializer combo. XAJAX is designed for simplicity and ease of use.</p> <p>HTML_AJAX allows for multiple transmission types for your ajax data - such as urlencoding, json, phpserialized, plain text, with others planned, and has a system you can use to write your own serializers to meet your specific needs.</p> <p>HTML_AJAX has a class to help generate javascript (HTML_AJAX_Helper) similar to ruby on rail's javascript helper (although it isn't complete), and an action system similar to XAJAX's "action pump" that allows you to avoid writing javascript data handlers if you desire.</p> <p>But it also has the ability to write your own data handling routines, automatically register classes and methods using a server "proxy" script, do different types of callbacks including grabbing remote urls, choose between sync and async requests, has iframe xmlhttprequest emulation fallback capabilities for users with old browsers or disabled activeX, and is in active development with more features planned (see the Road Map for details).</p> <p>HTML_AJAX has additional features such as client pooling and priority queues for more advanced users, and even a javascript utility class. Although you can use HTML_AJAX the same way you use XAJAX, the additional features make it more robust, extensible and flexible. And it is a pear package, you can use the pear installer to both install and keep it up to date.</p> <p>If you're asking which is "better" - as with most php scripts it's a matter of taste and need. Do you need a quick, simple ajax solution? Or do you want something that's flexible, extensible, and looking to incorporate even more great features? It depends on the project, you as a writer, and your future plans.</p>	ASP.Net (OnlineTestStart.php? quizId=70&quiz=ASP.Net Online Practice Test   Online Exam)
