Ques 6. Where should I start?

Ans. Assuming the framework you are using does not suffice your use cases and you would like to develop your own AJAX components or functionality I suggest you start with the article Asynchronous JavaScript Technology and XML (AJAX) With Java 2 Platform, Enterprise Edition.

If you would like to see a very basic example that includes source code you can check out the tech tip Using AJAX with Java Technology. For a more complete list of AJAX resources the Blueprints AJAX home page.

Next, I would recommend spending some time investigating AJAX libraries and frameworks. If you choose to write your own AJAX clients-side script you are much better off not re-inventing the wheel.

AJAX in Action by Dave Crane and Eric Pascarello with Darren James is good resource. This book is helpful for the Java developer in that it contains an appendix for learning JavaScript for the Java developer.

Is it helpful? Yes No [Add Comment](#) [View Comments](#)

Ques 7. Did Adaptive Path invent Ajax? Did Google? Did Adaptive Path help build Google's Ajax applications?

Ans. Neither Adaptive Path nor Google invented Ajax. Google's recent products are simply the highest-profile examples of Ajax applications. Adaptive Path was not involved in the development of Google's Ajax applications, but we have been doing Ajax work for some of our other clients.

Is it helpful? Yes No [Add Comment](#) [View Comments](#)

Ques 8. Is it possible to set session variables from javascript?

Ans. It's not possible to set any session variables directly from javascript as it is purely a client side technology. You can use AJAX though to asynchronously...

Cannot parse XML generated by JSP I am generating an XML using JSP, when i run the JSP in IE it shows the XML as per DOM, but when i try to parse it using Javascript , the command xmldoc.documentElement...

This is working code I am using, it might help you. if(!isIE) xmldoc = req.responseXML; else { //IE does not take the responseXML as...

Is it helpful? Yes No [Add Comment](#) [View Comments](#)

Ques 9. What do I need to know to create my own AJAX functionality?

| | | |
|--|--|---|
| tech=19&subject=EJB Interview Questions and Answers) | Ans. If you plan not to reuse an existing AJAX component here are some of the things you will need to know. Plan to learn Dynamic HTML (DHTML), the technology that is the foundation for AJAX. DHTML enables browser-base real time interaction between a user and a web page. DHTML is the combination of JavaScript, the Document Object Model (DOM) and Cascading Style Sheets (CSS). * JavaScript - JavaScript is a loosely typed object based scripting language supported by all major browsers and essential for AJAX interactions. JavaScript in a page is called when an event in a page occurs such as a page load, a mouse click, or a key press in a form element. | SCJP (OnlineTestStart.php? quizId=19&quiz=SCJP Online Practice Test Online Exam) |
| Core Java 306 (Technology.php? tech=1&subject=Core Java Interview Questions and Answers) | * DOM - An API for accessing and manipulating structured documents. In most cases DOM represent the structure of XML and HTML documents. * CSS - Allows you to define the presentation of a page such as fonts, colors, sizes, and positioning. CSS allow for a clear separation of the presentation from the content and may be changed programmatically by JavaScript. Understanding the basic request/response nature of HTTP is also important. Many subtle bugs can result if you ignore the differences between the GET and POST methods when configuring an XMLHttpRequest and HTTP response codes when processing callbacks. | .NET Microsoft .NET (OnlineTestStart.php? quizId=5&quiz=Microsoft .NET Online Practice Test Online Exam) |
| JDBC (Technology.php? tech=42&subject=JDBC Interview Questions and Answers) | JavaScript is the client-side glue, in a sense. JavaScript is used to create the XMLHttpRequest Object and trigger the asynchronous call. JavaScript is used to parse the returned content. JavaScript is used to analyze the returned data and process returned messages. JavaScript is used to inject the new content into the HTML using the DOM API and to modify the CSS. | ASP.Net (OnlineTestStart.php? quizId=70&quiz=ASP.Net Online Practice Test Online Exam) |
| Java Mail 27 (Technology.php? tech=22&subject=Java Mail Interview Questions and Answers) | Is it helpful? <input checked="" type="radio"/> Yes <input type="radio"/> No Add Comment View Comments | C#.NET (OnlineTestStart.php? quizId=71&quiz=C#.NET Online Practice Test Online Exam) |
| Tomcat (Technology.php? tech=33&subject=Tomcat Interview Questions and Answers) | Ques 10. Do I really need to learn JavaScript? | VB.Net (OnlineTestStart.php? quizId=72&quiz=VB.Net Online Practice Test Online Exam) |
| Servlets (Technology.php? tech=3&subject=Servlets Interview Questions and Answers) | Ans. Basically yes if you plan to develop new AJAX functionality for your web application. On the other hand, JSF components and component libraries can abstract the details of JavaScript, DOM and CSS. These components can generate the necessary artifacts to make AJAX interactions possible. Visual tools such as Java Studio Creator may also use AJAX enabled JSF components to create applications, shielding the tool developer from many of the details of | Database ORACLE (OnlineTestStart.php? quizId=20&quiz=ORACLE Online Practice Test Online Exam) |
